

Allweld Marine & Industrial

"The Best in the Weld"

COMPANY OVERVIEW

Allweld, a Cape Town based marine and industrial engineering company, has been servicing the Southern African market for almost fifty years. Traditionally established as a specialized welding and jobbing operation for companies involved in the local industrial and marine industry, Allweld has in the past number of years progressed into the broader sphere of transacting directly with leading local and international companies. Allweld's mantra being: **"The Best in the Weld"**.

This approach not only to be solutions-driven, but also extremely hands-on has allowed the youthful management team to develop into a most competitive and progressive company currently operating throughout various industrial sectors within South Africa. The focus is such that Allweld has subsequently identified the offshore oil and gas industry as one that requires an alternate choice of contractor for specialized welding, pipework, valve refurbishment, heat treatment and project management services.

In an effort to overcome the skills shortage, prevalent within the marine and industrial sectors, a sister-company, Allweld Solutions, was created to offer welding certification and the placement of trained welders within general industry. This training facility can accommodate up to 40 trainees offering testing and coding to industrial requirements.

Allweld Marine and industrial (pty) Ltd has matured into a company that offers OEM'S and project management companies technical and specialized support with regards to warranties repairs and refurbishment of equipment.
