

# **Marine & Industrial** **Allweld**

*"The Best in the Weld"*

## **VALVE REFURBISHMENT**

Allweld's valve division has been externally audited by our major customers and we are the preferred supplier to, large petrochemical refinery in the Western Cape.

The valve division can accommodate any size or type of valve with test pressures up to 2980 Bar. We also have a full machinshop to complement the valves by machining valve gates, spindles and bodies.

The testing bay has two testing rigs and can test with water, air and nitrogen.

We also have a recycling plant to purify the waste water.

Allweld also does do special coatings on gates (satellite, Bronze, s/steel, nickel and a host of other materials).

The industries we currently service are refineries, FPSO's, hydro-electric plants, water treatment plants and many others.
